## LENNOX STOCK CHILLER PROGRAM

**The Heatcraft Australia Stock Chiller Program is being widely used by contractors to meet the often critical time demands of the replacement chiller market.**

Downtime can be a costly period for any business. In addition to lost production, service repercussions and labour costs, there is also the stress factor to the business owner and staff. With the Lennox Stock Chiller Program, Heatcraft aims to minimise these cost and stress factors.

“The stock chiller program minimises chiller delivery turnaround and the attributes of the Lennox stock chillers are such that they also minimise chiller upgrade changeover”, says Thanh Ngo, Built Environment Segment Manager at Heatcraft Australia.

The company’s local stock holding covers air-cooled chillers with capacities from 30 to 300kW. Capacities greater than 300kW are also available and can be ordered by speaking with your Heatcraft Account Manager.

Lennox high-efficiency chillers are configured for a wide application range, including comfort, industrial, process and low temp/glycol applications. They have a compact footprint and are suitable for low to high ambient conditions. Lennox chillers are also equipped with comprehensive integrated options including hydraulic modules, HLI protocols, acoustic treatment and superior coil protection delivering excellent corrosion resistance.

John Mostyn, Heatcraft Field Engineer recently worked with Mark Anderson, Operations Manager of Clements, Air-Conditioning, Refrigeration, Electrical to install a Lennox Ecolean Chiller at the Sanitarium plant at Cooranbong, NSW.

Mark commented;

“The unit was needed to resolve a critical breakdown on the Pilot Plant Testing production line. Sanitarium’s ability to achieve production targets was compromised due to the existing chiller being out of action”.

Through the Heatcraft Stock Chiller Program, Heatcraft was able to offer Clements chiller selections based on Clements’ heatload calculations and site assisted commissioning, to get their customer back in operation. “The old chiller was decommissioning and the new chiller supplied, installed and commissioned in 16 hours”, continued Mark.

He added;

“Clements have continued to explore further options for the Lennox chillers for the simple fact that the equipment has performed to design conditions every time. With the assisted commissioning support it is a

## Your HVAC&R Business Partner

“no brainer”. Down time is reduced, there are no embarrassing false starts and it works first time. The product knowledge of the field engineers is second to none.”

### About Heatcraft:

Heatcraft Worldwide Refrigeration is the long-standing leader in the world of commercial refrigeration, providing climate-control solutions to customers in more than 70 countries. Heatcraft has long been known for combining innovative technologies with precision engineering to design refrigeration systems capable of meeting the demands of the most rigorous operating environments.

As part of Heatcraft Worldwide Refrigeration, Heatcraft Australia and New Zealand is a leading wholesale distribution business catering for the refrigeration and air conditioning trades with a distribution network of over 70 wholesale outlets. Through our partnership with Lawrence & Hanson Electrical we're expanding our distribution footprint to bring even greater access to a complete range of HVAC+R and Electrical products. Our exclusive brands include Kirby, Lennox, Gas2Go, InterLINK and Smart@ccess.

Heatcraft is committed to being your HVAC&R Business Partner.
