

LENNOX

The luxury of high efficiency gas heating

The Lennox G61 Series gas furnace is designed to deliver comfort as well as savings

Offering an impressive 5.3 Star efficiency rating, the Lennox G61 Series Gas Furnace is the ultimate in energy efficient heating. With a fully enclosed burner chamber and unique sound absorbing insulation, the G61 Series reduces noise and provides peaceful operation, whether it's installed internally or externally.

A variable speed inverter fan motor carefully controls the flow of air throughout the home and a multi-stage gas valve provide two levels of heating – stage one for the mild days and stage two for the colder days. The variable speed inverter motor uses about two-thirds less electricity than a standard motor and will help take energy bills to new lows.

Couple the Lennox G61 Series Gas Furnace with a Lennox add-on cooling unit, advanced programmable thermostat, air purification system or humidifier for a complete home comfort package.
